

How To Add Microsoft.NET Framework 2.0

If after installing our software, the software does not save your files, it may be because your computer does not have the database system installed. It is called **Microsoft.NET Framework 2.0**. Most computers have it, but some do not. A new computer would not. This is a safe software from Microsoft. Sometimes, just performing an update to your Microsoft operating system will add this, but if not, it is free to download online at

After you click on the Download button, a page such as this appears. Click on Start Download.

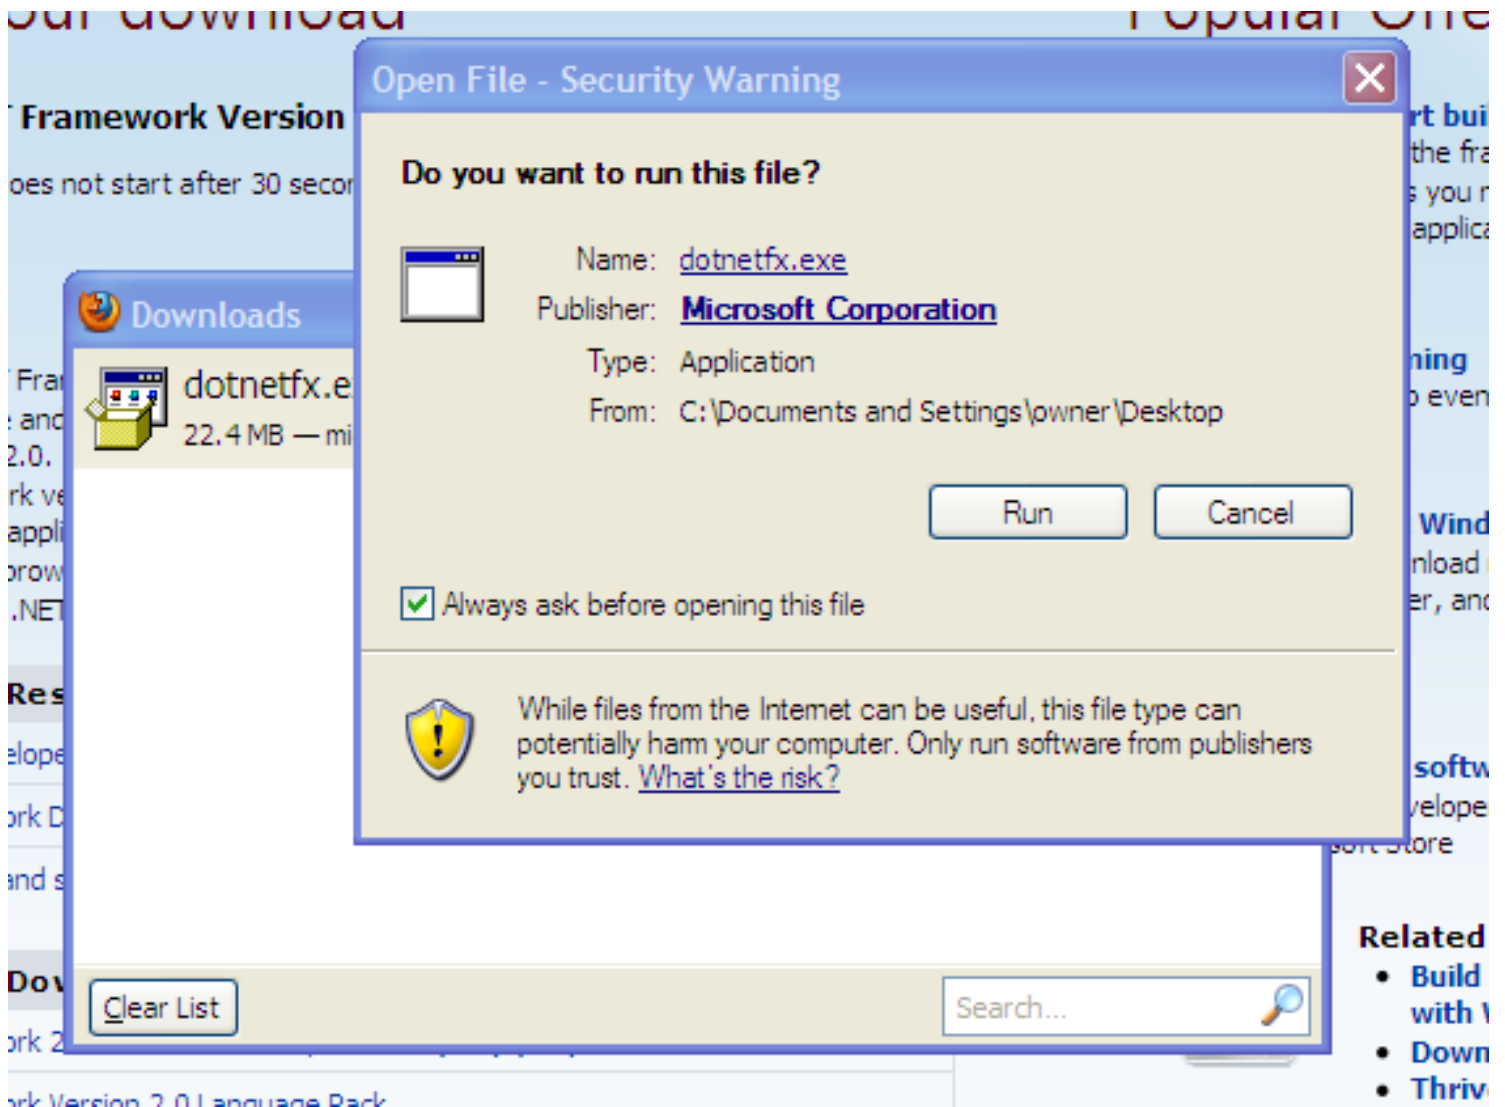

Now, you are asked if you wish to open or save this file. Click Save File. The file will download to your computer. You must select a place to save the file. It is not important where you save the file. But remember where you save it.

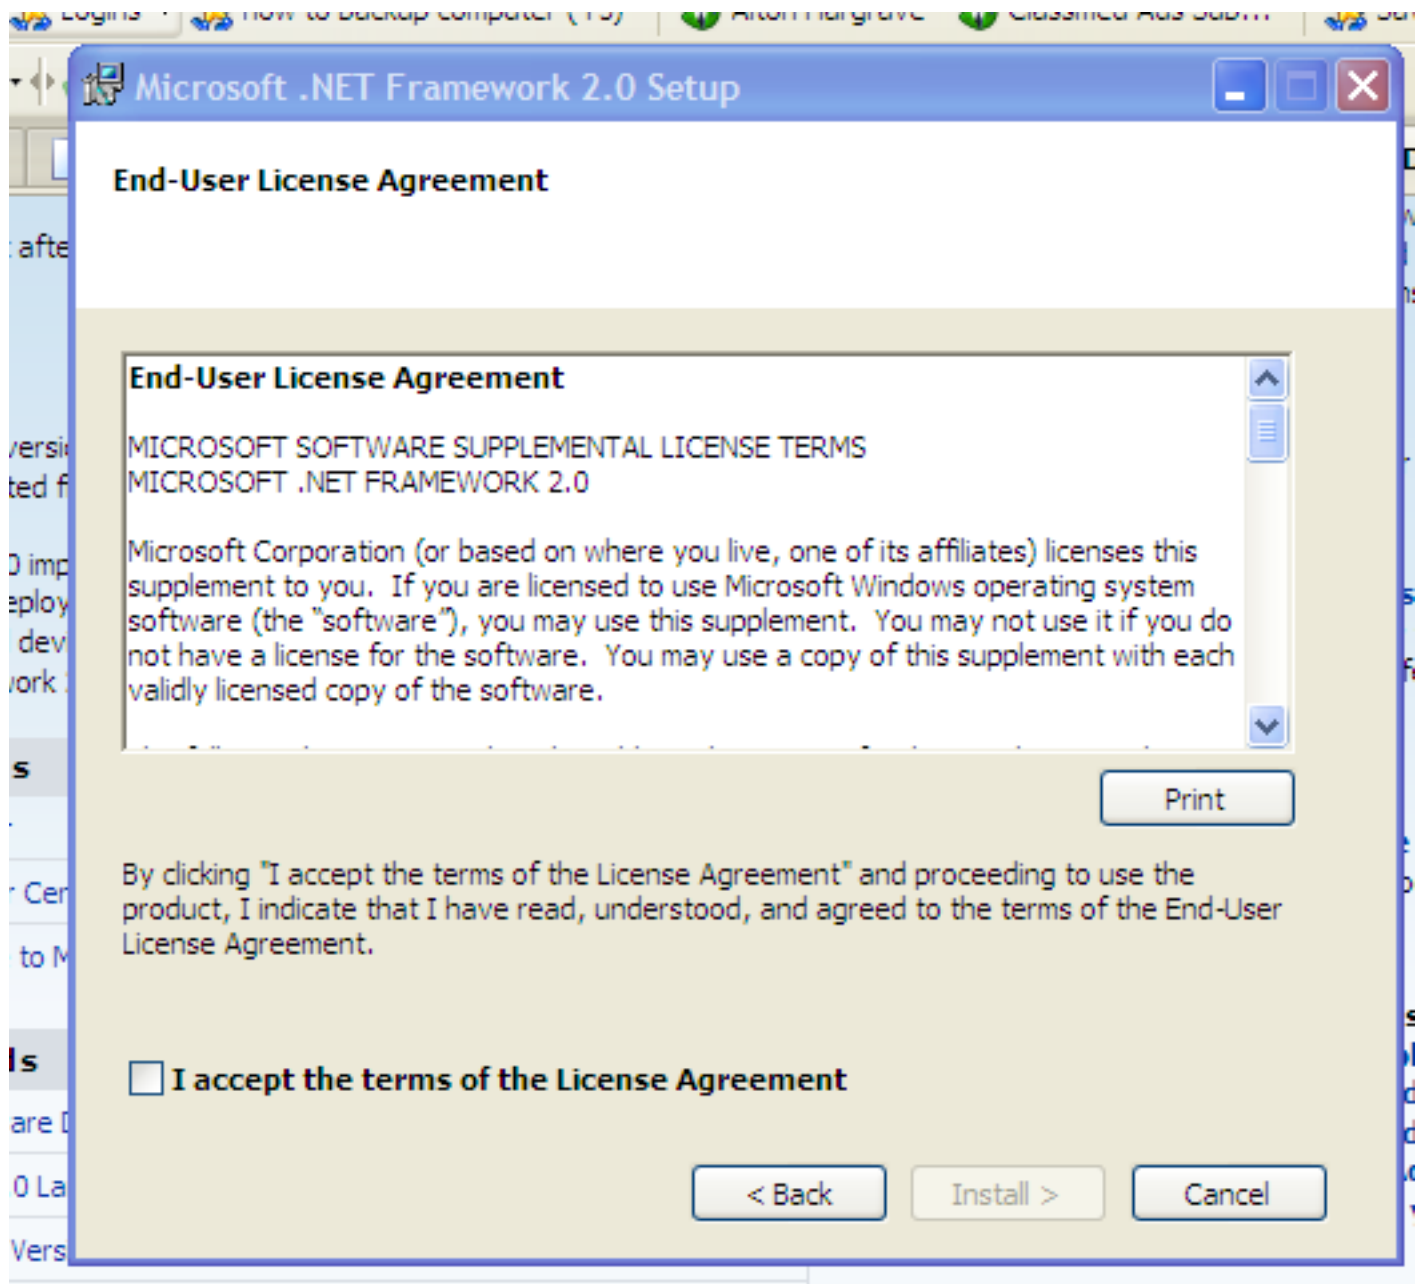

Relax for a few minutes as the file downloads to your computer. Notice it is an .exe file. After the download, to run an .exe file, you just click on it and follow any on-screen prompts.

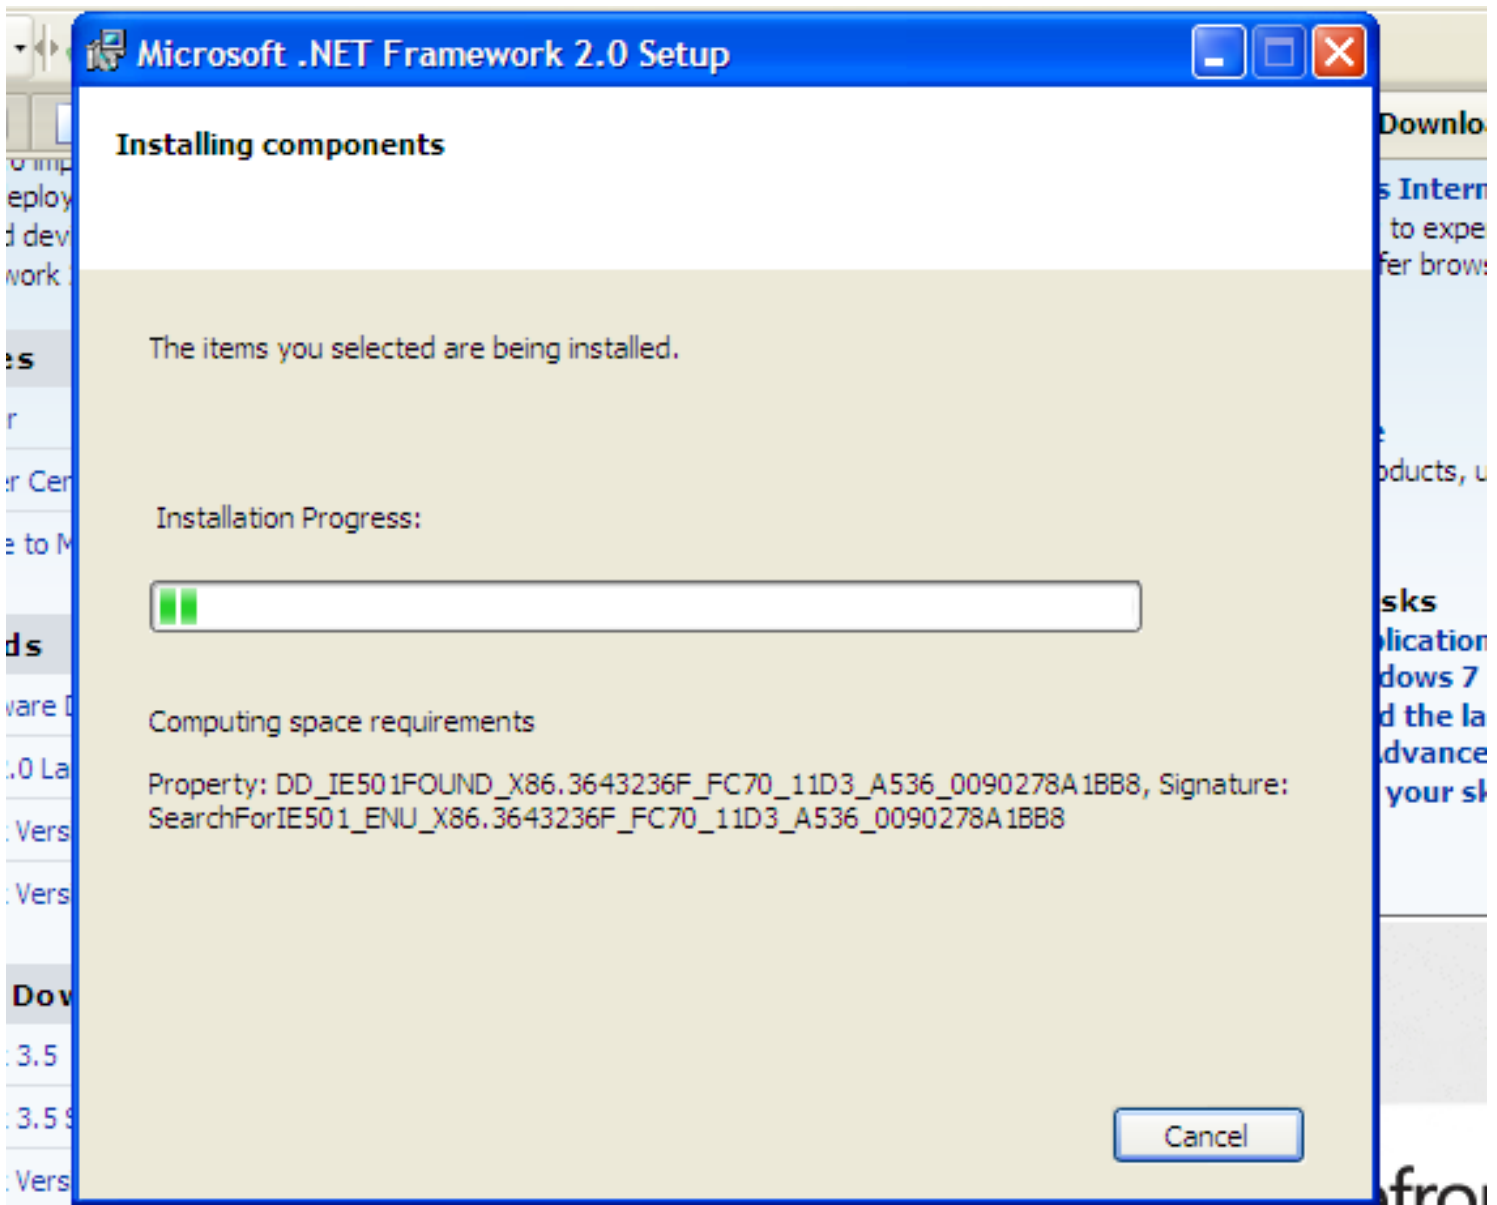

Now, you can click on the file and watch the screen.

Click on the Run button.

As you watch and follow the installation, you must accept the terms. Tick the box to accept.

Watch as the software installs. Microsoft.NET Framework 2.0 will be installed on your computer. Our software products and those of many others utilize this.
